DETAILED ACTION

1. This Office Action is response to Applicant's Amendment filed on March 04, 2009. Claims 3-9, 12-18, 21-22, 37-38 are pending in the application. Claims 25 and 26 are cancelled.

Allowable Subject Matter

2. Claims 3-9, 12-18, 21-22, 37-38 are allowed and renumbered as 1-18.

Reason for Allowance

3. The present invention related to an apparatus and a method for improving pixel response speed for reducing the flicker of the display images to increase the display quality. Each independent claim, inter alia, identifies the uniquely distinct features:

In reference to claims 3,

calculating a first mean of corrected grayscale levels of a first group of pixels in proximity to the at least one corrected pixel;

calculating a second mean of corrected grayscale levels of a second group of pixels in proximity to a corrected pixel determined to have an unacceptable grayscale level, upon the first mean differing from a grayscale level of the corrected pixel by more than a threshold value; and

changing the unacceptable grayscale level to a grayscale level equal to the second mean.

In reference to claims 6 and 15,

calculating a mean difference in grayscale level between the at least one pixel and a plurality of pixels of a first group of pixels, located on a segment having a

Art Unit: 2629

midpoint at the at least one pixel and located to one direction of the at least one pixel, calculating a mean difference in grayscale level between the at least one pixel and a plurality of the first group of pixels located to another direction of the at least one pixel, and determining that the at least one pixel has an unacceptable grayscale level upon the mean differences having different signs;

calculating a second mean of corrected grayscale levels of a second group of pixels in proximity to the at least one pixel upon the at least one pixel being determined to have an unacceptable grayscale level; and

changing the unacceptable grayscale level to a grayscale level equal to the second mean.

In reference to claim 12,

a determination section, adapted to calculate a first mean of corrected grayscale levels of a first group of pixels in proximity to the corrected at least one pixel and adapted to determine whether the corrected at least one pixel has an unacceptable grayscale level, upon the first mean differing from a grayscale level of the corrected at least one pixel by more than a threshold value;

wherein the second correction section is further adapted to calculate a second mean of corrected grayscale levels of a second group of pixels in proximity to the corrected at least one pixel, upon the determination section determining that the corrected at least one pixel has an unacceptable grayscale level, and adapted to change the unacceptable grayscale level of the corrected at least one pixel, to a grayscale level equal to the second mean.

4. The closest prior arts of Naito et al. (U.S Patent No. 6,704,008) and Kawanabe et al. (U.S Patent No. 7,158,107) show similar systems, but either singularly or in combination, fail to anticipate or render above quoted limitations obvious.
